1 Column	0
2 Column	1
3 Column	2
4 Column	3
5 Column	4
6 Column	5
7 Column	6
8 Column	7
9 Column	8
10 Column	9

**Note:**

1 Column version does not contain middle ladders

## \*BEFORE YOU BEGIN

**Tip from the manufacturer on securing the front spacer bars & skinny spacer bars** (steps 5 & 6)

### Option #1 (recommended)

When securing your front spacer bars it is recommended to use a brad nailer with an air compressor. Drive one or two brad nails through the spacer bar into each vertical upright of the middle and end ladders.

### Option #2

Use a hammer and the provided finish nails. Drive one finish nail through the spacer bar into the vertical uprights of the middle and end ladders. Hammer the nail until it is almost flush with the surface of the wood. Use a nail setter to carefully countersink the nail until it is about 1/16" below the surface of the wood.

## Step 1

We will begin with the bottom of the rack. Start by securing two of your pre-drilled spacer bars to one of your middle ladders using the provided wood screws. The bottom of the ladder should fit snug into the notches of the pre-drilled spacer bars. (figure A).

## Step 2

Secure the rest of your middle ladders to the pre-drilled spacer bars using the provided wood screws. (figure B)

---

## Step 3

Secure two more pre-drilled spacer bars to the tops of your middle ladders using the provided wood screws. (figure C)

## Step 4

Insert your two end ladders into the end notches of the pre-drilled spacer bars making sure they are properly aligned with the middle ladders. Secure using the provided wood screws. (figure D)

---

## Step 5

Secure three pre-drilled spacer bars to the back of your rack using the provided wood screws. (figure E)  
See the provided assembly diagram for exact placement of spacer bars.

## Step 6

Attach your two front spacer bars to the front of your rack using a brad nailer or the provided finish nails (figure F).

See the provided assembly diagram for exact placement of the spacer bars.

## Step 7

Attach your skinny front spacer bar to the front of your rack using a brad nailer or the provided finish nails. The front skinny spacer bar should be exactly aligned with the seventh bottle support from the bottom of the rack. (figure G)

## Step 8

Your rack comes with an 1-1/2" Toe-Kick base. This base is optional and designed to lift your rack up off the ground. Simply place your rack on top of the Toe-Kick base. That's it! (figure H)

H

## You're Finished

We hope you enjoy your new wine rack. Cheers and thank you for your purchase.
